Dynamic Distillery

You have been put in charge of launching Dynamic Distillery's new bourbon whiskey. There are 4 nonoverlapping phases: research, development, manufacturing system design, and initial production and distribution. Each phase can conducted the two speeds: normal or priority. The times required (in months) to complete each phases at the two speeds are:

Level	Research	Development	U	Initial Production and Distribution
Normal Priority	4 2	3 2	5 3	2

The costs (in millions of \$) of complete each phase at the two speeds are:

Level	Research	Development	U	Initial Production and Distribution
Normal Priority	2 3	2 3	3 4	1 2

You have been given \$10 million dollars to execute the launch as quickly as possible. Formulate this problem as a dynamic program by giving its shortest/longest path representation.
