• What about other directions?

## Lesson 22. The Gradient Vector and Directional Derivatives

## 0 Warm up

a. Find $\vec{a} \cdot \vec{b}$ .	$ec{j}-2ec{j}.$
b. Find a unit vector that has the	e same direction as $\vec{b}$ .
The gradient vector	
• The <b>gradient</b> of a function $f(x, y)$	y) of two variables is
• The gradient is a <u>vector</u> of partial	l derivatives
<b>Example 2.</b> Let $f(x, y) = \sin y + e^x$	$^{cy}$ . Find $\nabla f(1,0)$ .
The directional derivative	
The directional derivative  Recall for a function $f(x, y)$ :	
• Recall for a function $f(x, y)$ :	

• Let  $u = \langle a, b \rangle$  be an arbitrary unit vector

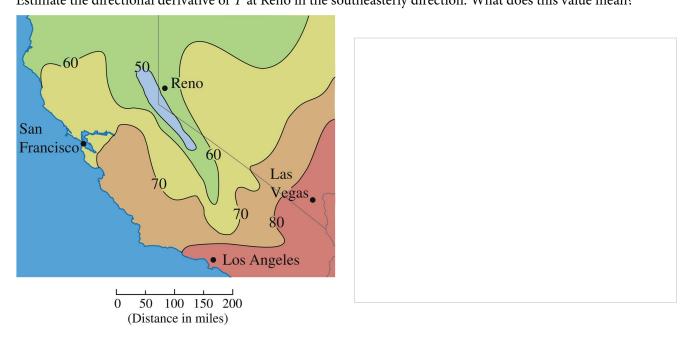

• The **directional derivative** of f at (x, y) in the direction of a unit vector  $\vec{u} = \langle a, b \rangle$  is

$$D_{\vec{u}}f(x,y) = \lim_{h\to 0} \frac{f(x+ha,y+hb) - f(x,y)}{h}$$

• The directional derivative  $D_{\vec{u}}f(x,y)$  is

**Example 3.** The contour map of the temperature function T(x, y) is shown below (x and y are simply coordinates). Estimate the directional derivative of T at Reno in the southeasterly direction. What does this value mean?

Note: $\vec{u}$ must be a unit vector	
• If you are asked for the directional derivative "in the direction of $\vec{v}$ ," make sure $\vec{v}$ is a unit vector. If isn't, make it one.	f <b>it</b>
<b>Example 4.</b> Find the directional derivative of $f(x, y) = \sin y + e^{xy}$ at the point $(1, 0)$ in the direction of the vect $x = \langle -3, 4 \rangle$ .	or
The gradient and directional derivative for functions of 3 variables	
The gradient of a function $f(x, y, z)$ of three variables is defined similarly:	
$\nabla f(x,y,z) = \langle f_x(x,y,z), f_y(x,y,z), f_z(x,y,z) \rangle$	
The directional derivative of $f$ at $(x, y, z)$ in the direction of a unit vector $\vec{u}$ can be computed using	
$D_{\vec{u}}f(x,y,z) = \nabla f(x,y,z) \cdot \vec{u}$	
The directional derivative $D_{\vec{u}}f(x,y,z)$ is	
<b>Example 5.</b> Find the directional derivative of $f(x, y, z) = \ln(3x + 6y + 9z)$ at point $(1, 1, 1)$ in the direction $z = (2, 6, 3)$ .	of
