Lesson 23. Double Integrals Over General Regions

1 In the previous lesson: rectangles

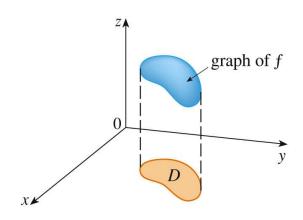

• Rectangle
$$R = [a, b] \times [c, d]$$

= $\{(x, y) | a \le x \le b, c \le y \le d\}$

$$\iint_{R} f(x, y) dA = \int_{a}^{b} \int_{c}^{d} f(x, y) dy dx$$

$$= \int_{c}^{d} \int_{a}^{b} f(x, y) dx dy$$

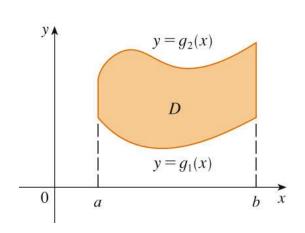

2 General regions

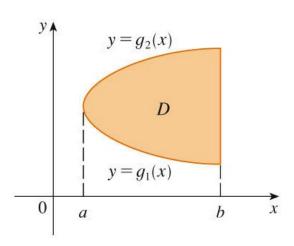

- How about general regions *D*?
- Intuition: if $f(x, y) \ge 0$, double integral still represents volume of solid between D and graph of f
- We focus on two types of regions
- **Type I regions**: lies between the graphs of two continuous functions of x, that is:

$$D = \{(x, y) \mid a \le x \le b, \ g_1(x) \le y \le g_2(x)\}$$

o Examples:

 \circ If *D* is a type I region (and *f* is continuous on *D*), then

- In the inner integral, x is regarded a constant in f(x, y) and the limits of integration
- **Type II regions**: lies between the graphs of two continuous functions of *y*, that is:

$$D = \{(x, y) \mid c \le x \le d, \ h_1(y) \le x \le h_2(x)\}$$

• Examples:

 \circ If *D* is a type II region (and *f* is continuous on *D*), then

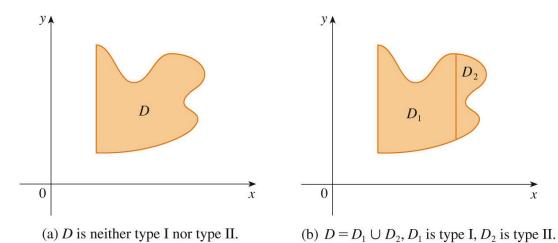

• In the inner integral, y is regarded a constant in f(x, y) and the limits of integration

Example 1. Find $\iint_D (x - y) \, dy \, dx$, where $D = \{(x, y) | 0 \le x \le 1, 2x \le y \le 2\}$.

ole 3. Eva	aluate $\iint_D (2-2\pi)$	2x – y) dA, when	re D is the triangu	llar region with v	rertices (0,0), (2,0), (1,
ole 3. Eva	aluate $\iint_D (2-1)^{-1}$	2x – y) dA, when	re D is the triangu	llar region with v	rertices (0,0), (2,0), (1,
ple 3. Eva	aluate $\iint_D (2-1)^{-1}$	2x – y) dA, when	re D is the triangu	llar region with v	rertices (0,0), (2,0), (1,
ple 3. Eva	aluate $\iint_D (2-2\pi)$	2x – y) dA, when	re D is the triangu	llar region with v	rertices (0,0), (2,0), (1,

• If $D = D_1 \cup D_2$, where D_1 and D_2 don't overlap except perhaps on their boundaries, then

$$\iint_D f(x,y) \, dA = \iint_{D_1} f(x,y) \, dA + \iint_{D_2} f(x,y) \, dA$$

Example 4. Write $\iint_D (2-2x-y) dA$ as the sum of 2 type I region iterated integrals, where *D* is the triangular region with vertices (0,0), (2,0), and (1,1).

mple 6. Cons	ider the double	e integral \iint_{D}	f(x, y) dA wh	ere D is enclo	psed by $x = 0$,	$x = \sqrt{1 - y^2}. \text{ Se}$
